

**BHASKARACHARYA NATIONAL INSTITUTE FOR SPACE
APPLICATIONS AND GEO-INFORMATICS**

WEEKLY PROGRESS REPORT (12/02/2026 – 18/02/2026)

WEEK 7

PROJECT NAME	Monitoring and change detection system using OSINT
---------------------	---

PROJECT DESCRIPTION :

**CREATING OSINT TOOL FOR MONITORING AND
CHANGE DETECTION SYSTEM BY MONITORING
PUBLICLY AVAILABLE INFORMATION.**

GROUP MEMBER :

Harshil Vaniya, Shalomo Agarwarkar, Vrushank Thakkar

GROUP ID :

2026G195

GROUP GUIDE :

CHASIYA KRUTIKA

GROUP COORDINATOR :

SIDHDHARTH PATEL

COLLEGE GUIDE NAME :

BHUMIKA DOSHI

COLLEGE GUIDE No. :

9016888925

COLLEGE GUIDE EMAIL. :

BHUMIKASDOSHI@GMAIL.COM

COLLEGE NAME :

**DEPT. OF BIOCHEMISTRY AND FORENSICS SCIENCE, GUJARAT
UNIVERSITY**

12/02/2026	• Improved mail functionality by mailing csv and Wapiti report in the mail. (Vrushank Thakkar) • Added DNS analyser and HTTP prober in the tool to find the validity of subdomains(Harshil Vaniya) • Studied the method of integrating C++ with Python and other languages. (Shalomo Agarwarkar)
13/02/2026	• Current finding in tabular form in the daily report sent to mail to the user(Vrushank Thakkar) • Added help section && added filtering section to the tool. (Harshil Vaniya) • Flight tracker module result format optimisation (Shalomo Agarwarkar)
14/02/2026	Holiday (Saturday)
15/02/2026	Holiday (Sunday)
16/02/2026	• Added verifier to the tool for subdomain verification (Harshil Vaniya) • Tried to created insta pii detector but failed due to Instagram compression(Vrushank Thakkar) • Improved the Phone number OSINT module. (Shalomo Agarwarkar)
17/02/2026	Full Day Leave (Vrushank Thakkar, Harshil Vaniya, Shalomo Agarwarkar)
18/02/2026	• Studied the basics of Maltego and integration. (Vaniya Harshil) • Tried to make a browser extension for PII detection (Shalomo Agarwarkar) • Updated medium OSINT PII detect tool (Vrushank Thakkar)

Next Week Plan	Integrating other OSINT-related modules and starting to work on GUI integration into the basic framework of tool
-----------------------	---

1. Extending Python with C or C++

It is quite easy to add new built-in modules to Python, if you know how to program in C. Such extension modules can do two things that can't be done directly in Python: they can implement new built-in object types, and they can call C library functions and system calls.

To support extensions, the Python API (Application Programmers Interface) defines a set of functions, macros and variables that provide access to most aspects of the Python run-time system. The Python API is incorporated in a C source file by including the header "Python.h".

The compilation of an extension module depends on its intended use as well as on your system setup; details are given in later chapters.

Note: The C extension interface is specific to CPython, and extension modules do not work on other Python implementations. In many cases, it is possible to avoid writing C extensions and preserve portability to other implementations. For example, if your use case is calling C library functions or system calls, you should consider using the `cffi` module or the `ctypes` library rather than writing custom C code. These modules let you write Python code to interface with C code and are more portable between implementations of Python than writing and compiling a C extension module.

1.1. A Simple Example

Let's create an extension module called `spam` (the favorite food of Monty Python fans.) and let's say we want to create a Python interface to the C library function `system()` [1]. This function takes a null-terminated character string as argument and returns an integer. We want this function to be callable from Python as follows:

```
>>> import spam
```

```
C++
#include <pybind11/pybind11.h>

namespace py = pybind11;

// Simple C++ function
int add(int a, int b) {
    return a + b;
}

// Create Python bindings
PYBIND11_MODULE(example, m) {
    m.attr("add") = "Example C++ integration using pybind11";
}
```

So your CLI tool stays the same.
You just build a thin transform wrapper around it.

Architecture You'll Build

```
graph TD
    Maltego_CLI[Maltego CLI] --> Transform_Script[Transform Script (Python)]
    Transform_Script --> Your_Orchestrator[Your Orchestrator]
    Your_Orchestrator --> Modules_Registry[Modules Registry]
    Modules_Registry --> Results[Results = formatted + Maltego graph]
```

Step-by-Step Integration

Install Maltego TRX Library
